Introduction

The **Computer Arts Society** (CAS) was founded in 1968 to promote the understanding of the role of digital and electronic media in the arts. As it has developed over time, a key aim has become to ensure that the long history of the computer arts is recognised by contemporary artists, technologists, audiences and collectors.

The society currently organises talks, events, exhibitions and performances, and uses social media to highlight the ways that digital and electronic technologies can be of value to the creative sector.

After celebrating its 50th anniversary in 2018, CAS renewed its commitment to promoting the use of digital media in contemporary practice and to providing a forum for diverse audiences of all ages and backgrounds to meet and exchange ideas. The Computer Arts Society is a specialist group of the **BCS Chartered Institute for IT** and works closely with The Computer Arts Archive Community Interest Company.

The artwork featured in this catalogue was exhibited at BCS Moorgate in London between July and December 2023. The work includes pieces selected from an open call to members of CAS, together with invited works from other members and associates.

The exhibition included a large number of printed artworks, plus video works and an installation artwork. It featured contributions by over 40 artists and showcased a wide variety of artistic styles and techniques. For many of the artists, it is the first time their work has been included in a Computer Arts Society exhibition.

We hope that the “Computer Arts Society Members’ Show” will become an annual event and that it not only helps promote the artists involved, but also demonstrate to visitors the range of work that comes under the label of “computer art”.

If you are interested in knowing more about the Computer Arts Society, the other exhibitions we run, our archive and the talks we host, please visit our website. The site also contains a PDF copy of this catalogue, as well as a growing selection of other catalogues and publications.

We expect to release an invitation to submit work for the 2024 show in March 2024. Again, keep an eye on the website for details, as well as our social media channels on Facebook, X and Instagram.

Invited Artists

Ernest Edmonds / Aphra Shemza / Sean Clark / Brian Reffin Smith

Graham Diprose / A-Maze Artists; Collective / Analema Group

Studio Rokoko / Fion Gunn / Jack Copeland, Peter Fitzpatrick & Vicki Hyde

Andy Lomas / Stephen Scrivener / Karoline Winzer

Ernest Edmonds

Colour Energy (2010)

Ernest joined CAS just after it was first formed and has participated ever since. In 2017 he received the ACM SIGGRAPH Distinguished Artist Award for Lifetime Achievement in Digital Art.

Colour Energy was commissioned for the 2010 Vivid Festival in Sydney, Australia. It was shown on Grid Gallery, a 16x1 metre screen in the street, at eye level. *Colour Energy* was a late example from the *Video Construct* series of computer-generated movies first made in the 1980s. It was also influenced by the *Shaping Form* interactive works that had been shown from 2007.

The work was adapted for the BCS large screen.

Sean Clark

Computational Constructs
0623.1 / 0623.2 /
0623.3 (2023)

Sean Clark is an independent artist, curator, and researcher based in Leicestershire, UK. His artwork explores interaction and connectedness through the construction of audiovisual systems presented on screen, as installations, and as prints. He is the director of Interact Digital Arts and the curator of the Computer Arts Archive. He has a PhD in Computational Art from De Montfort University and in 2016 was co-winner of the Lumen Prize for 3D/Sculpture and the Art.CHI Digital Art Prize.

www.seanclark.org

Brian Reffin Smith

You too can paint "An AI generated sculpture of Marlene Dietrich having breakfast with Damien Hirst in the style of Jeff Koons" (2023) / Paint your own computer art #14 (Painting by numbers) (2023) / Pistol Bridge (2022)

My painting by number (PBN) computer-based works offer an invitation, to colour in the numbered zones; and a refusal, or several. They could not have been made without the computer's prompting.

The complexity of the numbers and arrows preclude any colouring-in. There are no brushes or paints provided.

That there is a coloured version of the breakfast scene, and that the data of *Pistol Bridge* (2022) have been sort-of hand coloured but not coloured-in, isolates the codes from any art-like 'reality' even more. This reinforces the idea that the PBN codes become the artwork itself.

www.brian-reffin-smith.com

Graham Diprose

Escape From Flatland (2007)

3D Anaglyph photography of a subject, by shooting simultaneously from two slightly different angles through red and cyan filters, dates back to the 1890s. It was particularly popular in some 1920-1940s movie productions. In 2007, I was 'beta testing' two new Leaf digital backs for Hasselblad cameras and decided to set up this experiment. Martina wore a turquoise dress to keep all the colours as natural as possible. Using some of the highest resolution digital equipment of the day, and assembling the pair of images in Photoshop, this research was published by EVA London in 2007.

A-Maze Artists' Collective
*Fion Gunn / Maureen Kendal /
Shoran Jiang / Audrey Mullins /
Freddie Sanders / Ardern
Hulme-Beaman / Alan Hudson /
Chen Mei-Tsen / Nazia Parvez*

A-Maze Artists' Collective is
woman-led and includes
practitioners of all ages &
diverse cultural backgrounds
with a wide range of artistic
and technical skills. The
collaboration grew out of a
particular historical moment,
the COVID-19 pandemic. The
crisis showed us how
interconnected we all are and
how, if we can just change one
thing in our lives, it has an
impact on everything else.
Fion Gunn initiated the
collective in March 2020 and
she and *Maureen Kendal* are
co-leads in the group.

www.worldsinflux.com

Analema Group

*KIMA: Noise Maxilla (2019) /
KIMA: Colour - Monet 002 (2020)*

The Analema Group explores the intersection of sound and matter through participatory art. Their signature project *KIMA* explores visual representations of sound. *KIMA: Noise* explores the effect of urban noise on health and wellbeing, displaying noise pollution around the Tate Modern where the noise levels exceed 80 decibels during daytime, with severe health impact on local residents. *KIMA: Colour*, commissioned by the National Gallery X, sonifies colours in Monet's 'Water Lillies, Setting Sun' while providing an immersive audio-visual experience through 360 sound and video. Both *KIMA Colour* and *KIMA: Noise* form part of the AHRC-funded p_ARTicipate research project on the effect of participatory art on wellbeing.

analemagroup.com

Studio Rokoko

*Gainsborough (2023) / Little
VersailleX (2023)*

A collaborative creative entity sometimes referred to as Drucilla Burrell and Magdalene Celeste. Together they have more than 20 years in the fields of fashion, costume design, styling, creative direction, art and photography. Their work focuses on the whimsical Queering of historical narratives and codifiers using contemporary technology and self portraiture.

atelierrococo.com

Fion Gunn
The Dreams of City Dwellers
(2012)

I made this artwork in response to working in Beijing. It is such a hardcore polluted urban environment and yet at the heart of Chinese culture is a profound feeling for the natural world, one which is layered with fantasy nowadays. I used photos that I took at Jianguomen, painted on them, added collage and a miniature bridge from which hang tiny scrolls of traditional Chinese landscapes. The piece is made inside a frame which was used to export a brick of Chinese tea more than 50 years ago. It is a miniaturised 3D window into Beijing life as I have felt it.

www.fiongunn.org

**Jack Copeland, Peter
Fitzpatrick & Vicki Hyde**
Turing Diptych (2016)

This artwork came about after a mock-up digital artwork by Jonathan Bowen in the style of Andy Warhol for the cover of a book about Alan Turing, "The Turing Guide" (Oxford University Press, 2017), by Jack Copeland, Jonathan Bowen, Robin Wilson, Mark Sprevak, et al. Jack Copeland then organised a more professional artwork, as shown here, which became the basis for the eventual book cover.

Andy Lomas

Chemotaxis3D9 0002 0694

0950 (2023)

Explorations of digital simulation of chemotaxis, the process by which cells migrate following spatial cues. Inspired by the social amoeba *Dictyostelium discoideum*, propagating periodic waves of chemicals influence the movement of cells as well as being amplified by the cells to express a wide range of rich dynamic behaviour. This image is from a simulation of 26,843,546 cells that starts with completely random positions but through chemical signals organise themselves into complex structured forms.

andylomas.com

Stephen Scrivener
Homeostasis (2022)

Working in collaboration with fellow artist Sean Clark, Stephen Scrivener has created *Homeostasis*, an augmented reconstruction of his 1970s artwork *The Machine*. The underlying system is unchanged, and the physical display is a near reproduction using modern LEDs embedded in an acrylic panel. The artwork is able to run in a self-contained or interactive mode.

www.stephenscrivener.com

Karoline Winzer
Mycelium (2021)

Merging touch, sound, bioelectricity, and physical computing, Mycelium is an interactive experience designed to tangibly visualise the power of connection. The installation is conceptually parallel to networks of underground fungi called mycelium, which collaborate to connect forest ecosystems. Just like the mycelial system, this installation only works when each member plays their part - and when they do, incredible things happen.

www.karolinewinzer.com

Video Showreel

A showreel of artist videos was displayed during the exhibition in the BCS Moorgate common area. The video is now available on the **Computer Arts Society YouTube Channel**. The video can be viewed on your mobile device by scanning the QR Code below.
