# The Computer Arts Society

*The Computer Arts Society was founded in 1968 and in 2018 marks its 50th anniversary. To celebrate this occasion an exhibition of artwork by twelve computer artists associated with the Society over the years was held in Leicester and Brighton. This publication documents this exhibition.*

At the time of the Society's formation, the three founder members – Alan Sutcliffe, George Mallen and John Lansdown – had been involved with computing and its related concepts for some time. They knew Jasia Reichardt, the curator of Cybernetic Serendipity and had participated in, or advised on, aspects of the exhibition.

Sutcliffe was involved with the Cybernetic Serendipity exhibition through his collaboration with composer Peter Zinovieff and Electronic Music Studios (EMS). Mallen was working with the English cybernetician Gordon Pask at Systems Research and had assisted on the production of the interactive robotic work Colloquy of Mobiles shown at the exhibition. Although not mentioned in the catalogue credits, Reichardt knew and respected Lansdown who, from 1963, had used computing techniques in architectural design and planning.

The original idea for a society dedicated to the computer arts (which was to become the Computer Arts Society) was instigated by Sutcliffe at the

IFIP (International Federation for Information Processing) Congress in August 1968 in Edinburgh. Sutcliffe and Zinovieff had won second prize with ZASP, their piece of computer-composed music. Members of the Congress suggested to Sutcliffe that he might like to convene a meeting of people working in a similar field whilst they were all together at the Congress, as most had not had a chance to meet like-minded persons outside their own team before. Sutcliffe collated the names of interested individuals and the group formed out of this, with the first meetings in London held in a room belonging to University College London, in or near Gower Street in September 1968. Subsequent meetings were often held at the offices of Lansdown's architectural practice (he became the Secretary with Sutcliffe the Chairman and Mallen, Treasurer).

The Computer Arts Society was founded to encourage the creative use of computers and to allow the exchange of information in this area. It was recognised that this was an area where there had been increasing activity, but with little formal publication of methods and results and little communication between artists in different fields (music, visual, performing arts, and so on). The society organised its first computer art show, Event One, in 1969.

# PAGE

PAGE is the bulletin of the Computer Arts Society. It was first published in 1969 and was an important vehicle for communicating the Society's activities, particularly in its early years. The bulletin was first edited by auto-destructive artist Gustav Metzger and has since been edited by Alan Sutcliffe, Dominic Boreham, Paul Brown and others.

British Computer Society  
23 Dorset Square, London NW1 1  
Wednesdays at 6.30 pm  
23 April EVENT ONE: Autopsy  
A discussion of the comments  
on EVENT ONE and the pattern  
of future events  
28 May To be announced  
18 June To be announced  
Computer Arts Society members and guests  
only. No charge

PAGE will print a list of exhibitions, conferences,  
events in the field of computer art, graphics design,  
organisers in any part of the world are invited to  
inform the Editor.

PAGE is available to libraries and institutions.  
Annual subscription £1 (£2.3), Order from Alan  
Sutcliffe.

Books, periodicals, offprints, reviews and news  
items relevant to the work of the Society are  
welcomed for the library now being established.  
Please send material to John Lonsdown.

The Computer Arts Society can recommend speakers  
on many aspects of the creative application of  
computers in the pure and applied arts and for  
introductions to computers and programming.  
Write to the Secretary,  
R. John Lonsdown, 50/51 Russell Square  
London WC1 1

The Committee of the Computer Arts Society wish  
to thank the many individuals and organisations who  
helped to make EVENT ONE a technical and  
artistic success.

Copies of the 20 page programme for EVENT ONE  
containing articles, graphics etc, can be obtained  
from Alan Sutcliffe. Price (post inclusive)  
3/6 (£.50).

#### PUBLICITY

If you have access to a notice board please pin up  
this bulletin or circulate it to those who may be  
interested.

A section of the stage during EVENT ONE  
Photo: Peter Huns

A conference on the use of computers as an aid to  
design will take place at the University of Southampton  
15-18 April 1969. The conference is organised by  
the Institution of Electrical Engineers.

A one-day symposium on computer graphics arranged  
by the Association for Computing Machinery takes  
place at Brunel University 25 April 1969.

"Computers and Visual Research". The Gallery of  
Contemporary Art Zagreb has arranged an interna-  
tional exhibition, competition, and symposium under  
this title. The symposium will be held 5 - 7 May.  
The exhibition opens 5 May 1969 and ends in August.  
For details write to Dr. Boris Katerina gajic  
suverena uljnost Katerinin trg 2 Zagreb  
Yugoslavia.

The Gallery of Contemporary Art Zagreb launched  
an important international movement "New Tendencies"  
with the exhibition "NT 1" (Zagreb 1961) "NT 2"  
(Zagreb Venice Leverkusen 1963) "NT 3" (Zagreb 1965).  
Concurrently with "Computers and Visual Research"  
the Gallery will hold the exhibition "New Tendencies  
4" which, as well as having recent work by artists  
associated with N.T., will be in the nature of a  
retrospective.

Computer Graphics 70, Second International Sym-  
posium 14 - 18 April 1970. Papers are being invited.  
In combination with Symposium, CG 70 International  
Exhibition is announced as "the greatest ever  
Computer Graphic event". Details from the  
organiser: R.D. Parslow, Computer Department,  
Brunel University Uxbridge, Middlesex.

Between 1969 and 1985 there were 52 issues of  
PAGE - ranging in size from one-page bulletins to  
full magazines. There was then a hiatus from 1985  
until 2004, after which 13 additional issues have  
since been published. In March 2018 a complete  
set of scanned copies of PAGE was made available  
for free download from the Computer Arts Society  
website.

#### PLANS FOR THE SOCIETY

Following the success of EVENT ONE, the  
Society is planning a full programme of activities.  
The first of these are detailed at the head of this  
Issue.

#### Meetings

A series of three public lectures in the Nash  
House Cinema will show some of the ways that  
computers can be used in the arts. His knowledge  
of computers will be assumed, and the intention  
is to impart information rather than general views.

Three meetings at the British Computer Society  
will allow new members to say how the Society  
should develop, discuss our attitudes to other  
technologies in the arts, and the aesthetics of  
computer art.

Based on these, a full programme of public and  
Society meetings will be arranged for 1969 - 70,  
beginning in September.

#### Workshop

A major aim of the Society is to found a permanent  
workshop having computing facilities, where co-  
operative projects can be undertaken and discussions  
carried on in a working atmosphere. As a test-bed,  
we are hoping to arrange a week-end workshop at  
Brunel University sometime during June.

#### Joint Presentations

We are being invited increasingly to take part in  
exhibitions and conferences organised by others.  
This is welcome not only as relieving us of some  
of the organisational work, but more important as  
allowing the use of computers in the arts to be seen  
as part of the ever more overlapping areas of arts,  
technology and science.

#### EVENT TWO

Initial thoughts are now being gathered for the  
Society's second main event, to be held towards  
the end of 1969.

#### APRS AND MEMBERSHIP

The aims of the Society are to encourage the creative  
use of computers in the arts and allow the exchange  
of information in this area.

Membership is open to all at £1 (£2.3) per year  
(students not applicable). Members are entitled to  
reduced prices for all the Society's public meetings,  
and to a copy of PAGE.

The Society has the status of a specialist group of  
the British Computer Society, but membership of  
the two Societies is independent.

On all matters of information, circulation and  
membership, write to the Chairman  
Alan Sutcliffe, International Computers Limited  
Brunel House, Boreham

#### OPINION

The Computer Arts Society's EVENT ONE at the  
Royal College of Art 20 - 30 March 1969, attracted  
700 visitors. The key to the impact and success of  
EVENT ONE lies in the computer-linked equipment  
presented. A PDP-7 computer with visual display  
unit (Imperial College); 2 Teletype terminals plus  
green plotters (Time Sharing Limited); 2 Teletype  
terminals and green plotters (G.C.L.L. Limited); and  
a telephone link to Peter Zinovlev's PDP-6/line  
Visual Display Unit by International Computers  
Limited.

The introduction of this working equipment within  
a fine art context represents a revolution in the  
British art world. After years of theoretical  
work, and isolated contacts with technology,  
here was the major COLLECTIVE step forward.  
It is important to remember that the men who with  
exceptional skill and energy engineered this, are  
primarily professionals in the fields of computing  
and architecture.

The event was apprehended by the visitor and  
participant as a continuum of activity and sound.  
Having passed Brower-Hatchers programmed  
sculpture that was being erected in the foyer  
throughout the week-end, and the few exhibits at  
the entrance to the Subscription Hall, the visitor  
was immediately caught up with the terminals, and  
the PDP-7 under the charge of Chris Jones, whose  
display was often surrounded by up to 15 people  
watching the light-pen in use.

The central area was used for performances and  
discussions. Moving beyond this, one entered the  
screened-off stage. Here were visitors, aided by  
technicians, were working terminals and plotters,  
whilst the light structures including Adrian Rutben's  
Object-Text-Light Interval, and the Folder by  
John Backlog, were seen (and heard) at their best  
in the occasionally deserted space. Some of the  
performances suffered from sounds carried across  
the hall, but this mobility of sound and people added  
to the excitement and sense of interaction. Films  
made by computers, or dealing with the subject, were  
screened in the lecture theatre in three daily sessions.

#### Gustav Metzger

Extract from programme for EVENT ONE describing  
Philip Hodgetts's light/sound structure illustrated  
overleaf.

"Light bulbs are situated at selected nodes in a three-  
dimensional cubic lattice. Selective illumination of  
sets of these lights plots out planes and patterns in  
3-D space. A mechanism sequencing illumination  
of lights has been built and used so that changing  
patterns and transformations of patterns can be ob-  
served. This device embodies a fixed sequence of  
transformations.

The current experiment involves a tape reading  
mechanism and a computer terminal. Required se-  
quences can be programmed for the computer and  
output on to punched tape. The tape is then used to  
drive the sculpture via the tape reader. This will  
enable the sculptor to develop and control sequences  
more easily."

PAGE is a publication of the Computer Arts Society,  
appearing 8 times a year. All views are those of  
the individual contributors. On all editorial matters  
(not circulation) write to the Editors

Gustav Metzger: 189/Box 151 London WC1

## Recent Activities

The Computer Arts Society originally ran from 1968 until 1985. In 2002 the CACHE project at the Vasari Lab in the School of History of Art and Visual Media, Birkbeck, University of London began to digitise and catalogue the image holdings of the Society and related archives. This resulted in a re-establishment of the Computer Arts Society in 2004. The core archive was then acquired by the Victoria and Albert Museum and now forms part of their Computer Art Collections.

Two books, *A Computer in the Art Room: The Origins of British Computer Arts 1950-1980* (2008) by Catherine Mason and *White Heat Cold Logic: British Computer Art 1960-1980* (2009) by Paul Brown, Catherine Mason, Charlie Gere and Nicholas Lambert, have been published that detail the early history of computer art, including the early CAS period.

A follow-up project entitled *Computer Art and Technocultures*, based jointly at Birkbeck and the Victoria & Albert Museum ran from December 2009 until April 2010. This project ran a symposium, *Ideas Before Their Time*, at the British Computer Society, and a two-day conference, *Decoding the Digital*, at the V&A on 4th-5th February 2010.

Since re-forming in 2004, the Computer Arts Society has run an extensive speaker programme

from its base at the British Computer Society in London, as well as from other London venues, and more recently in Leicester and elsewhere.

The Society also runs the annual *Electronic Visualisation & the Arts (EVA)* conference in London. Through its status as a Specialist Group of the British Computer Society it is able to support exhibitions and other computer art activities throughout the year.

The Computer Arts Society is currently creating an on-line archive of its activities over the past 50 years. Work in progress can be seen on the CAS website and already includes new materials not presented on-line before.

---

# The CAS50 Collection

As part of its 50-years celebration, the Computer Arts Society agreed to support an exhibition of artwork from artists who have been associated with the Society. It was planned that this exhibition would be first shown in Leicester in Summer 2018 and then tour elsewhere over the following year.

Support for the exhibition from the artists invited has been such that the project is now being expanded to become the CAS50 Collection. This will be a collection of high-quality computer artworks, donated by the artists, that we intend to develop over the coming years and ultimately donate to a suitable museum or gallery.

The collection is currently being curated by Sean Clark of Interact Digital Arts in Leicester, who has donated much of his own collection of artworks to the project. As the collection grows, with more artists and collectors becoming involved, we hope to establish a unique and accessible resource for people interested in digital and computer art.

The first twelve artists in the collection, whose work is included in this publication, are Stephen Bell, Peter Beyls, boredomresearch, Daniel Brown, Paul Brown, Sean Clark, Ernest Edmonds, Sue Gollifer, Desmond Henry, William Latham, Andy Lomas and Stephen Scrivener. Many of the artists featured are in the V&A collection and are Lumen Prize winners.

For the Brighton showing of the exhibition work was included from Roger Saunders. Roger was a student in Brighton in the early 1970s and was active in the Computer Arts Society at the time.

In addition to contributing artworks to the CAS50 Collection, Roger has also donated many early computer art documents. These will be made available in archive section of the CAS website in the near future.

# Stephen Bell

Stephen Bell's interactive computer programs generate shapes inspired by his observations of animal and plant behaviour. Recent works use algorithms derived from the behaviour of bees gathering nectar combined with computer graphic techniques usually considered mistakes to create spatially ambiguous compositions that nevertheless possess an underlying natural logic.

Bell started to use computers in his art at The Slade during the late seventies, including the "ranstak" plotted drawings using brush pens. Attending CAS meetings at the time confirmed that there were people who thought that making art using computing was a worthwhile pursuit at a time when it was not generally accepted.

His work first came to public attention in the mid-1980s when he was Artist in Residence in the Computing Laboratory of the University of Kent at Canterbury. There he wrote programs that were based on predator-prey interaction and human conflict, producing abstract images of trails of their movement that looked a bit like frozen firework displays. Bell was able to share his ideas

at the time with CAS members when Karen Mahoney interviewed him for PAGE 52 in 1985.

In 1991 Bell was awarded a PhD for his thesis "Participatory Art and Computers" in which he used his own "Smallworld" suite of programs as a case study. The research at Loughborough University was supervised by Ernest Edmonds and Susan Tebby.

He recently retired from having spent nearly thirty years as a lecturer, first at Reading University Fine Art Department then at the National Centre for Computer Animation in Bournemouth, encouraging art and design students to use programming creatively and experimentally. During this time CAS provided a valuable forum and a supporting network of like-minded people, which helped him to continue a trajectory that had started whilst at The Slade.

# Peter Beyls

Peter Beyls is an interdisciplinary artist working on the intersection of computer science and the arts. He is active in the global domain of Media Art as a researcher, curator, educator and practicing artist. He published extensively on various aspects of digital art. Beyls studied music at the Royal Music Conservatory Brussels, was a student at the pioneering Electronics Experimental Department, Slade School of Art, University College London and holds a PhD in computer science from the University of Plymouth, UK.

He was a professor of digital culture at LUCA Brussels and visiting professor at The School of Arts, University College Ghent, Belgium and various institutions in the USA, China and Japan. Beyls was a researcher at the VUB Artificial Intelligence Lab, Brussels and CITAR (Centre for

Research in Science and Technology for the Arts), UC Porto, Portugal and is currently a researcher at the Bio Lab, University College Ghent. His present research interests include machine learning in interactive music systems, big data analysis, visualization and sonification, generative autonomy in machines, aesthetic and cognitive issues in software art and experimental control structures for live performance.

# boredomresearch

boredomresearch is a collaboration between British artists Vicky Isley and Paul Smith, their work benefits from a long lasting fascination in the mechanics of the biological world which they explore using contemporary technology. Their work transcends boundaries between art, science and society, with previous projects exploring topics including: the intricate biological signatures of neural activity, the frontiers of disease modeling and our cultural obsession with speed.

With two decades of artistic practice, exploring an understanding of the natural world through the medium of computational technologies, boredomresearch have become intimately aware of the sensitivity and vulnerability of complex systems, including those which support human life on earth.

boredomresearch have been working in collaboration with world leading science institutions across Europe creating artworks developed from ground breaking research. Their collaboration with Dr Paddy Brock, a mathematical modeler at the Institute of Biodiversity Animal Health and Comparative Medicine at the University of Glasgow, led towards the creation of AfterGlow. This new representation of malaria infection transmission addressed the limitations of existing models and was awarded, in September 2016, the Lumen Prize moving image award.

Their seminal work Real Snail Mail (the world's first webmail service to use real snails) challenged

our cultural obsession with speed, highlighting perverse socio-economic distortions, centered on ideas of productivity, which exploit technological innovation to enslave humankind in a work life imbalance that continues to deteriorate despite the introduction of numerous 'time saving' technologies. Receiving worldwide attention, including: BBC, TIME Magazine, New Scientist and Discovery Channel Canada, this and other works by boredomresearch, open channels for meaningful dialogue and engagement between public and scientific domains.

The artworks of boredomresearch are in collections around the world including the British Council and Borusan Contemporary Art Collection, Istanbul. Recent international exhibitions include: ISEA, Manizales (2017); Future Emerging Art & Technology (FEAT) Exhibition, BOZAR Brussels (2017); Data Aesthetic Exhibition, Amsterdam (2016); Bio-Art, Seoul (2015); TRANSITIO MX\_06 Electronic Arts & Video Festival, Mexico City (2015); Soft Control: Art, Science and the Technological Unconscious, Slovenia (2012) and Gateways, House of Electronic Arts, Basel (2012).

# Daniel Brown

Daniel Brown is a creative-technologist, working in the fields of generative and interactive design and art - creating apps, websites & installations for luxury brands and public and private artworks.

Inspired since early childhood by his father, the artist Paul Brown, he grew up surrounded by fellow digital artists and curators such as Barbara Nessim, Patric Prince, William Latham and Tony Longson – many of whom were also CAS members – and chose to follow in his father’s footsteps.

Since 1999, Daniel has been chosen by Internet Business Magazine as one of the top 10 internet designers; was one of Creative Review’s ‘Stars of the New Millennium’; and more recently featured in The Barbican’s touring Digital Revolutions exhibition (2014) and The New York Cooper Hewitt Design Triennial (2016). His work for Nick Knight can be seen on Apple’s ‘Thirty Years of Mac’ documentary / commercials.

He has been acknowledged as a pioneer in the new media field - his experimental works are now archived in the San Francisco Museum of Modern Art, Denver Art Museum and London’s Victoria & Albert Museum. He was chosen as London Design Museum’s UK Designer of the Year in 2004 and since then selected for The Observer’s ‘80 people who will define the next 10 years’,

Design Week’s Hottest 50 Designers and invited to Buckingham Palace to honour the contribution of design to the British economy and culture. He is featured in Debrett’s People of Today and an honorary member of The International Academy of Digital Arts and Sciences (IADAS).

In a public role Daniel is a regular speaker, including giving a series of lectures at The Royal Society for the Arts on topics including: The use of design skills to empower the disabled; The role of mathematics & programming in design, art & education and Generative design, fashion and branding.

In 2008 Daniel joined with his father Paul – and established Brown & Son to promote their work in the crossover between art, science & technology since 1968. Their first joint show – Brown & Son: Art That Makes Itself – was held at Watermans in London in 2015 and included a one-day symposium sponsored by the Computer Arts Society.

# Paul Brown

Paul Brown is an artist and writer who has specialised in art, science & technology since the late 1960's and in computational & generative art since the mid 1970's. His early work included creating large-scale lighting works for musicians and performance groups (like Meredith Monk, Music Electronica Viva, Pink Floyd, etc...) and he has an international exhibition record dating to the late 1960's that includes the creation of both permanent and temporary public artworks. He has participated in shows at major international venues like the TATE, Victoria & Albert and ICA in the UK; the Adelaide Festival; ARCO in Spain, the Substation in Singapore and the Venice Biennale. His work is represented in public, corporate and private collections in Australia, Asia, Europe, Russia and the USA.

In 1984 he was the founding head of the United Kingdom's National Centre for Computer Aided Art and Design and in 1994 he returned to Australia after a two-year appointment as Professor of Art and Technology at Mississippi State University to head Griffith University's Multimedia Unit. In 1996 he was the founding Adjunct Professor of Communication Design at Queensland University of Technology.

From 1992 to 1999 he edited fineArt forum, one of the Internet's longest established art 'zines and from 1997-99 he was Chair of the Management

Board of the Australian Network for Art Technology - ANAT. He has been active in CAS since the mid-1970's and in 2005 he was elected Chair and served in this position again from 2008-10. He is also moderator of the DASH (Digital ArtS Histories) and CAS e-lists. . He is currently editor of PAGE – the bulletin of the CAS as well as Secretary of the society.

In 1996 he won the prestigious Fremantle Print Award and during 2000/2001 he was a New Media Arts Fellow of the Australia Council when he spent 2000 as artist-in-residence at the Centre for Computational Neuroscience and Robotics (CCNR) at the University of Sussex in Brighton, England. From 2002-05 he was a visiting fellow in the School of History of Art, Film and Visual Media at Birkbeck College, University of London, where he worked on the CACHE (Computer Arts, Contexts, Histories, etc...) project and since 2005 he has been a visiting professor and artist-in-residence at the CCNR, Dept. of Informatics at the University of Sussex. From 2010 to 2012 he was Synapse artist-in-residence at the Centre for Intelligent System Research, Deakin University in Geelong, Australia – a position supported by the Australia Council for the Arts and the Australia Research Council.

# Sean Clark

Sean Clark is an artist and curator, the Founder and Managing Director of web/mobile developer Cuttlefish, the Director of Leicester arts company Interact Digital Arts, a Visiting Researcher at the Institute of Creative Technologies at De Montfort University in the UK and an International Professor at Guangdong University of Technology in China.

In his commercial work he is interested in mobile multimedia, collaborative computing and the Internet of Things. In his arts work he is inspired by systems theory, the nature of interactivity and creative explorations of flow and connectedness.

Over a period of almost 30 years he has had a varied career that has seen him work in the arts, academia and commerce and he is comfortably able to move his focus between the three.

As a researcher he has published over 30 research papers and has spoken at numerous conferences and seminars. He has an Honours Degree in Computer Studies from Loughborough University, a Masters in Digital Arts from Camberwell

College of Arts, University of the Arts London, and is currently completing a practice-based PhD in Systems Theory and Digital Arts at De Montfort University.

He is a Fellow of the British Computer Society and active member of the Computer Arts Society. In 2016 he was the co-winner of the inaugural ArtCHI award in San Jose, CA and the Lumen Prize for 3D/Sculpture in London, UK. In 2015 he was shortlisted for a Talk Talk Digital Heroes Award for his education work.

# Ernest Edmonds

Ernest Edmonds was born in London in 1942. He now lives in the Peak District and in Sydney Australia. He has pioneered the field of computational art and contributed to the broader field of contemporary art from the late 1960s to the present. In 2017 he was awarded the ACM SIGGRAPH Distinguished Artist Award for Lifetime Achievement in Digital Art as well as the ACM SIGCHI 2017 Lifetime Achievement Award for the Practice of Computer Human Interaction. He has been a University Head of Department and a Dean and is currently Professor of Computational Art at De Montfort University, Leicester, UK. He is Chair of the Board of ISEA International.

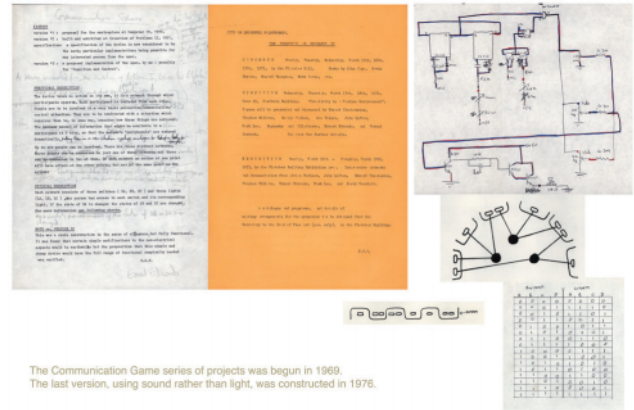

Ernest Edmonds has exhibited and published widely. Recent solo exhibitions have included a retrospective, “Constructs Colour Code” at The Gallery, De Montfort University, “Open Systems, Open Space” at Microsoft Research Asia, Beijing and “Systems and Software” in Shanghai Uni-

versity. Recent group shows include “Algorithmic Signs” at Fondazione Bevilacqua La Masa, San Marco Venice and “Códigos Primordials” (Primary Codes) at Oi Futuro Flamengo, Rio de Janeiro. Routledge have just published the book by Francesca Franco: “Generative Systems Art: the work of Ernest Edmonds”. Edmonds’ own latest book is “The Art of Interaction: What HCI Can Learn from Interactive Art”, published by Morgan&Claypool. He has been active in the Computer Arts Society since 1969, giving his first CAS talk in 1970. Edmonds has supervised many practice-based PhDs in the computer arts, including those by Stephen Bell, Stephen Scrivener, Dominic Boreham and Sean Clark.

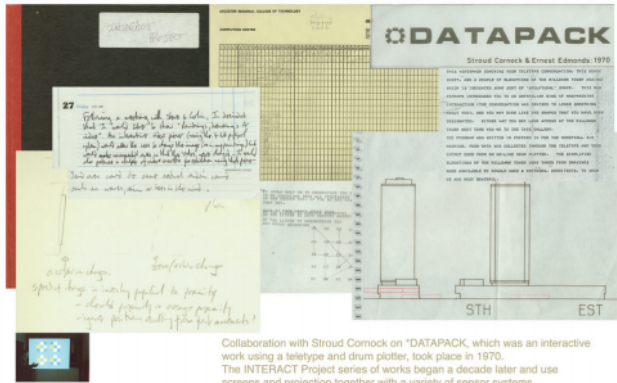

*[www.ernstedmonds.com](http://www.ernstedmonds.com)*

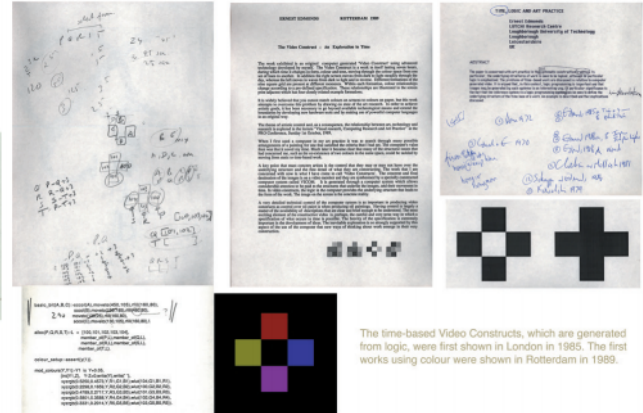

Nineteen (1968/9) was arranged with the help of a computer program

The Communication Game series of projects was begun in 1969. The last version, using sound rather than light, was constructed in 1976.

Collaboration with Stroud Cormack on "DATAPACK, which was an interactive work using a teletype and drum plotter, took place in 1970. The INTERACT Project series of works began a decade later and use screens and projection together with a variety of sensor systems.

The time-based Video Constructs, which are generated from logic, were first shown in London in 1985. The first works using colour were shown in Rotterdam in 1989.

# Sue Gollifer

Sue Gollifer works at the intersection of art and technology. As someone who works as an artist, curator, organiser, professor, researcher, chair and board member she embodies this intersection across many venues. A pioneer of early computer art, she has continuously explored the relationship between technology and the arts and has written extensively on this subject.

Although formally trained as a Fine Artist and not as a Computer Scientist and in the early years and had no access to computer facilities, she instead turned her self into a computer. Her work is held in both national and international public and private collections.

She is the Executive Director of the ISEA International Headquarters, and is on a number of National and International Committees, including the ACM Digital Art Community (DAC), Computer Arts Society (CAS) and Phoenix Brighton. She has been a curator of a number of International Digital Art Exhibitions including, ArCade, the UK Open International Biennale Exhibition, of Digital Fine Art Prints 1995 – 2007 and the SIGGRAPH Art Gallery Exhibition'04: Synaesthesia and the "Intuition and Ingenuity" art exhibition to celebrate the Alan Turing Centenary

2012 and the HOT PLATE Exhibition (2010) & William Latham Exhibition Mutator 1 & 2 (2013) at Phoenix, Brighton.

She is on the Editorial Board of Digital Creativity, a referred journal published by Routledge, and is the art editor and curator of the visual section 'Artist Space', which examines the work of artists and printmakers using digital technology.

In 2006 she was awarded an iDMAa Award, The International Digital Media Arts Award for her 'Exceptional Services to the International New Media Community'.

Sue has been involved with CAS since 2002, when the CACHE project at the Vasari Lab in the School of History of Art and Visual Media, Birkbeck, University of London began to digitise and catalogue the image holdings of the Society and related archives, documenting UK computer arts in the years to 1980. This resulted then re-establishment of the Computer Arts Society in 2004.

# Desmond Henry

Desmond Paul Henry (1921-2004) was both a Lecturer in Philosophy at Manchester University (1949-1982) and a part-time artist. During the 1960s he created a series of three electromechanical drawing machines from analogue Bombsight Computers originally used in WW2 Bombers to calculate the accurate release of bombs onto their targets. His first show of machine-generated art was in 1962 at the Reid Gallery, London. His second drawing machine was included in the ICA's seminal exhibition of 1968, Cybernetic Serendipity. Henry's substantial archive of machine-generated artworks act as precursors to post 1960s Digital Art. As such, he ranks as one of the early British pioneers of Computer Art.

With the support of CAS and its members, Elaine O'Hanrahan, the curator of Henry's artistic archive, has been actively promoting Henry's significant contribution to early Computer Art.

# William Latham

William Latham is well known for his pioneering Organic Art created in the late eighties and early nineties whilst a Research Fellow at IBM in Winchester with mathematicians Stephen Todd and Peter Quarendon. His computer art exhibitions “The Conquest of Form” and “The Empire of Form” toured the UK (starting at the Arnolfini in Bristol), Japan, Germany and Australia from 1989 for 3 years

In 1993 he moved into Rave Music working with The Shamen and other bands creating their album covers, stage visuals and videos then and worked in computer games development for consoles and PC. A field he was active in for ten years as a Creative Director of a seventy person console and games studio developing games published by Vivendi Universal, Microsoft and Warner Bros, hit games produced at that time included *Evolva* and *The Thing* (based on The John Carpenter movie) for console and PC.

In 2007 he became a Professor of Computer Art at Goldsmiths (University of London) with new research projects in Protein Docking Games with Imperial College Bioinformatics Group and Oxford Weatherall Centre of Molecular Medicine. He is a principal researcher with York University in the Digital Creativity Labs Project.

His Mutator VR Art Experience on HTC Vive developed with long term collaborator Stephen Todd with Lance Putnam and Peter Todd between 2016 and 2018 has been exhibited at Ars Electronica in Linz, Hybris (show linked to The Venice Biennial), Cyberfest in St. Petersburg (show linked to the Hermitage Museum) and East Gallery in Norwich.

In 2014 he co-founded SoftV Ltd which is developing serious games for tablet with UCL Institute of Cognitive Neuroscience and the NHS for stroke patients. He is a co-Director of London Geometry Ltd.

William was a student at The Ruskin School of Drawing (Oxford University) and The Royal College of Art. CAS co-founder John Lansdown was his PhD supervisor at the RCA and was very influential in William’s work and also encouraged him to write software and submit papers which lead to his Research Fellowship at IBM. William began to attend CAS meetings in the early 1980s.

# Andy Lomas

Andy Lomas is a computational artist, mathematician, and Emmy award winning supervisor of computer generated effects. Inspired by the work of Alan Turing, D'Arcy Thompson and Ernst Haeckel, his art work explores how complex sculptural forms can be created emergently by simulation of growth processes.

He has exhibited internationally in numerous joint and solo exhibitions, including at the Pompidou Centre, The Royal Society, SIGGRAPH, Japan Media Arts Festival, Ars Electronica Festival, Kinetica, Los Angeles Municipal Art Gallery, Los Angeles Center for Digital Art, Centro Andaluz de Arte Contemporaneo, Watermans, the Science Museum and the ZKM. His work is in the collections at the V&A and the D'Arcy Thompson Art Fund Collection, and was selected by Saatchi Online to contribute to a special exhibition in the Zoo Art Fair at the Royal Academy of Arts. In 2014 his work Cellular Forms won The Lumen Prize Gold Award.

He is a Visiting Lecturer at UCL, The Bartlett School of Architecture and a Visiting Research Fellow at Goldsmiths University of London. His production credits include Walking With Dinosaurs, Matrix: Revolutions, Matrix: Reloaded, Over the Hedge, The Tale of Despereaux and Avatar. He received Emmys for his work on The Odyssey (1997) and Alice in Wonderland (1999).

# Stephen Scrivener

Stephen Scrivener studied Fine Art at Leicester Polytechnic (now De Montfort University) from 1969 to 1972. Entering art school as a painter, he became increasingly dissatisfied with subjectively determined art making and inspired by the experimental artists working in the college, such as Jack Rodway and Gavin Bryars, he produced experimental works exploiting the natural properties of light and water. In 1972 he joined the Experimental Department at the Slade School of Fine Art, London, directed by the Systems Artist, Malcolm Hughes, where he soon made the shift to using computational systems to make artworks. During this period he modelled and visualised a variety of homeostatic systems. This included the design of a stand alone electronic device, called The Machine, that viewers could disrupt by interacting with a control panel.

After undertaking a PhD in Computer Science, he taught and conducted research into interactive computer systems design before returning to the art school in the early 1990s, culminating in his appointment as Head of Research at Chelsea College of Art. Since returning to the art school he has written widely on the theory and practice of artistic research. Today he works in a wide variety of media, including installation and recent group exhibitions include Csepel Works, Budapest; Recalculation, London; Automatic Art, London and OnePlaceTen, London. He is currently Emeritus Professor at Chelsea College of Arts and Visiting Professor at Ravensbourne University, London.

---

# Acknowledgements

The CAS50 exhibition would not have been possible without the support of Interact Digital Arts and the British Computer Society, of which the Computer Arts Society is a specialist group; Nicholas Lambert (CAS Chair), Paul Brown (CAS Treasurer) and Sean Clark (CAS50) and, of course, the participating artists.

Additional information about the CAS50 programme and the CAS50 Collection can be found on the CAS website.

[computer-arts-society.com/cas50](http://computer-arts-society.com/cas50)

The CAS is a Specialist Group of the BCS, The Chartered Institute for IT.

Thanks to the LCB Depot LightBox ([lcbdepot.co.uk](http://lcbdepot.co.uk)) for hosting the CAS50 exhibition in Leicester and to Phoenix for hosting the exhibition in Brighton ([phoenixbrighton.org](http://phoenixbrighton.org)). Thanks also to Stephen Lynch and Carise ZM for their help with the Leicester install and Fraser Kent and Sue Gollifer for their help with the Brighton install.

This publication was produced by Interact Digital Arts and designed and edited by Sean Clark. It is available for download as a PDF file from [interactdigitalarts.uk/publications](http://interactdigitalarts.uk/publications).
